EVY JUNIOR KEMBOU DONGMO

Computer Science Student | Software Development

Seeking a Summer 2027 co-op / internship — Remote, Fredericton, Moncton, Saint John, Montréal or Ottawa

Fredericton, NB • 506-230-8356 • evyjunior704@gmail.com • GitHub: evyjunior704-ship-it • LinkedIn: Evy Junior Kembou Dongmo

PROFESSIONAL SUMMARY

Computer Science student at the University of New Brunswick (BSc, Cybersecurity specialization, expected May 2028). Bilingual in English and French — fluent in both. Designed and directed a complete store-management system in Java and Spring Boot, led front-end development on a hackathon machine-learning project, and is building a Python phishing-detection application. Strong analytical thinker who brings the teamwork of competitive team sports to collaborative development.

TECHNICAL SKILLS

Programming Languages: Python, Java, Bash
Frameworks & Libraries: Spring Boot, Spring Data JPA, Thymeleaf, JavaFX
Databases: PostgreSQL, MySQL — JPA entity modelling, composite keys, foreign-key constraints
Development Tools: IntelliJ IDEA, Eclipse, VS Code, Linux (Ubuntu), GitHub; AI-assisted — Claude Code, Omniroute
Practices: Server-side validation, transactional logic, role-based access control, OWASP Top 10 awareness
Spoken Languages: English (fluent), French (fluent) — bilingual

PROJECTS — SOFTWARE DEVELOPMENT

StoreMS — Store Management System — *Java 21 · Spring Boot · PostgreSQL · JPA · Thymeleaf · 2025*

- Designed and directed development of a complete retail management application, coordinating an AI coding assistant and reviewing output against functional and security requirements.
- **Built the data layer:** JPA entity model with composite keys and foreign-key constraints; store-scoped queries from the authenticated user.
- **Transactional checkout** preventing stock race conditions; reporting system with server-side PDF generation (OpenPDF).
- **Secure sign-in and interface:** form login with BCrypt hashing, role-based access (Manager / Employee), Jakarta Bean Validation, CSRF protection.

Concealed — Neural Network Image Obfuscation — *Hackathon Project · Python · Node.js*

- **Co-created the concept and led front-end development** for a tool that uses a lightweight neural network to hide image details that recognition algorithms rely on, while keeping images clear to the human eye and small in file size.
- **Researched image decomposition** — how Sobel X/Y edge detection affects how a model interprets an image — to improve the obfuscation algorithm.

NLP Phishing Detection Application — *In Progress · Python · JavaFX*

- **AI-driven phishing-email detection:** data cleaning and preprocessing, model testing, and a JavaFX user interface.

Secure Web Application — *University of New Brunswick · Team Project · Python · Java · PostgreSQL*

- **Built authentication, access control and input validation** as part of a team; tested the application against OWASP Top 10 principles.

CTF & Technical Labs — *TryHackMe · Hack The Box*

- Hands-on labs in network exploitation, system hardening and web-application security — practice in systematic troubleshooting and analytical problem-solving.

EXPERIENCE

Customer Service Associate / Helpdesk Support — *City of Fredericton, Indoor Pool, Fredericton, NB · May 2025 – Present*

- Troubleshoot account, payment and technical system issues for customers and staff — front-line user support.
- Handle sensitive customer information responsibly and keep transactions and documentation accurate — the attention to detail that testing and code review demand.

EDUCATION & CERTIFICATIONS

BSc, Computer Science — Cybersecurity Specialization — University of New Brunswick · Expected May 2028

- **Certifications:** CompTIA Security+ (in progress, 2027) · AWS Cloud Practitioner (planned)

INTERESTS & STRENGTHS

Team sports — soccer and basketball: teamwork, communication under pressure and discipline. Analytical thinking: breaking problems into parts and following the evidence.
